

JAGGAER Contracts AI

AI Powered Intelligent
Contract Processing Platform

JAGGAER Contracts AI is a comprehensive contract processing platform powered by Artificial Intelligence & Machine Learning.

Using optical character recognition and natural language processing techniques, the Contracts AI solution can ingest contracts from disparate sources and holistically analyze them in a fraction of the time it

would take a team of people. It can then highlight risks and opportunities, which can be managed by a central team.

The platform works as a seamless AI layer on top of the JAGGAER Contracts+ solution and delivers deeper contract document visibility and insights.

Pain Points

Legal Ops **spend a lot of time manually** reviewing third party contracts for understanding Risk

M&A due diligence activities take time and effort resulting in **lengthy deal cycles**

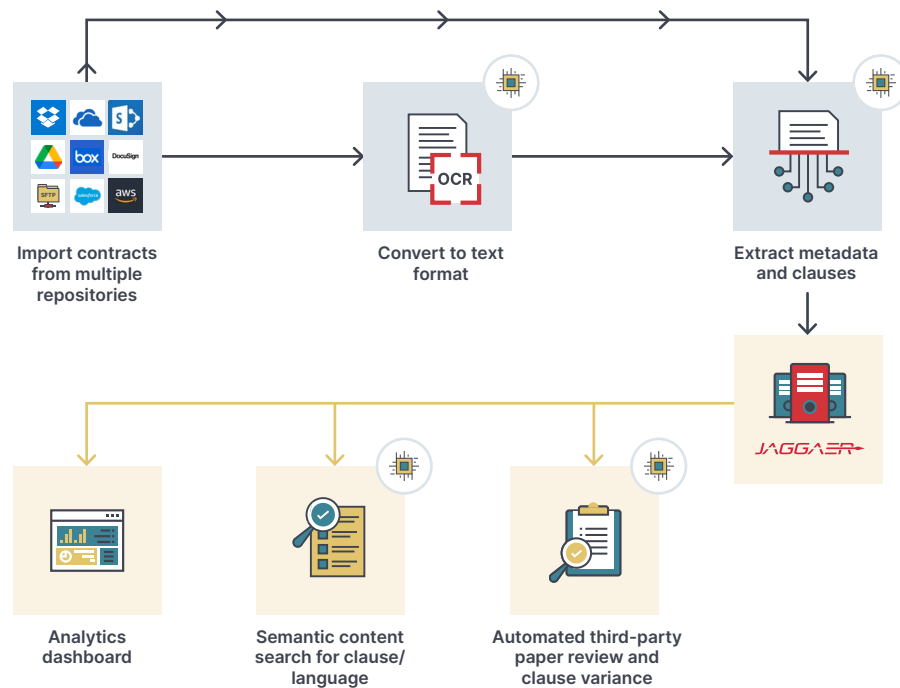

Not having control over supplier agreements and obligations introduces revenue leakages

Solution

AI assisted contract reviews
improves legal ops efficiency by 60%

Speed up deal velocity by 50%
using machine learning to review the critical contracts of the target company

AI powered data extraction and insights on supplier agreements
reduces revenue leakages by 40%.

Use Cases

- Facilitate faster and accurate review of contracts for liabilities and risks associated with business agreements
- Understand and analyze large volume of contract documents with new reference template
- Migration of legacy and/or paper contract documents leveraging OCR technology
- Review and assess contract obligation risk typically associated with lengthy M&A due diligence task

Key Business Outcomes

Reduce Project Costs

Save 50% or more in manual labor cost by automating data extraction

Improve Review Accuracy

Facilitate faster and accurate review of contracts for liabilities and risks associated with business agreements

Control Risks with 3rd Party Paper

Understand and analyze clause deviations from standard templates approved by the legal department

Increase Productivity

Unlock knowledge from large document data sets quickly by filtering search results using metadata
